Community-Based Health Information             Dr. Ana D. Cleveland

COURSE INFORMATION

Course Description
Librarians, because of their knowledge and training in the identification, selection, organization and dissemination of information, play an important role in consumer health information services, but there are special issues that they must be familiar with. The course is designed for students interested in health information in public, school, and academic libraries, as well as medical libraries, with a focus on how to serve the health information needs in the community. We have witnessed a strong increase in the number of health questions that the consumers of health services are bringing to all types of libraries. This course will give you the knowledge required to plan for services and programs related to health information.

Course Objectives
1. To introduce the application of community health information to all types of library environments.
2. To define health informatics within the framework of the community and the consumers of health care service and resources.
3. To examine the information needs of the health care consumer and patients.
4. To understand the information seeking behavior of health care consumers and patients.
5. To introduce information resources in a variety of formats relevant to the delivery of consumer and patient information services.
6. To explore the public health issues as they relate to libraries providing community-based health information service.
7. To examine the medico-legal aspects of consumer health information.

General Information

The course will be a combination of lectures, guest speakers, student reports, discussions, and lab sessions.

Office hours: I will be available one hour prior to class meetings. Also you may leave a message at the University Hilton Hotel (713) 741-2447.
Office phone: (940) 565-2445 (Denton)
Fax: (940) 565-3101 (Denton)
E-mail address: ana@lis.admin.unt.edu
Teaching Assistants: Jodi Wilcoxen
Dr. Don Cleveland

University Policies

Academic Misconduct

Cheating and disciplinary action for cheating is defined by the UNT Policy Manual Code of Student Conduct and Discipline. Cheating is an act of academic dishonesty. It is defined and will be handled as follows: "Plagiarism and cheating refer to the use of unauthorized books, notes, or otherwise securing help in a test; copying tests, assignments, reports, or term papers; representing the work of another as one's own; collaborating, without authority, with another student during an examination or in preparing academic work; or otherwise practicing scholastic dishonesty."

"Academic dishonesty matters may first be considered by the faculty member who may assign penalties such as failing, reduction or changing of a grade in a test, course, assignment, or other academic work, denial of a degree and/or performing additional academic work not required of other students in the course. If the student does not accept the decision of the faculty member, he/she may have his/her case heard by the academic department chairperson or head for review of his/her case. If the student does not accept the decision of the academic department chairperson, he/she may then follow the normal appeal procedures listed in Disciplinary Procedures."
ADA Information

Any student with a disability that will require accommodation under the terms of federal regulations must present a written accommodation request to the instructor on or before the second week of class. Copies of the School’s ADA Compliance Policy are available through the School Office (ISB 205; phone: (940) 565-2445). It is also recommended that student register with the Office of Disability Accommodation (University Union 318-A; 940-565-4323) of the University of North Texas. Further information is available online at: http://www.unt.edu/oda/index.htm.

COURSE REQUIREMENTS

I. Readings Assignments (25%)

During selected class lab periods, articles will be assigned to the student groups. The purpose of this assignment is to familiarize the students with the literature related to community, consumer health, public health and medico/legal.

For each article assigned to your group, please do the following:

1. Provide a summary of the two or three (2-3) points of each article.

2. Briefly describe the strength and weakness of the applications or ideas proposed in the paper.

II. Exercise Assignments (25%)

During selected class periods, information resources will be assigned and questions will be distributed. The purpose of this assignment is to familiarize the students with information resources in a variety of formats related to the course content.

1. Evaluate resources related to the course content. Guidelines will be provided for the evaluations. The students will provide these evaluations as presentations to the class.

2. Questions will be provided and the students will go and find the answers. The students will discuss in class the path followed to find the answers.

III. Mini Semester Project (50%)

Each student will select a topic related to a disease. You may take a consumer health, patient education, public health or a legal perspective to your topic. I strongly suggest that you may want to choose the consumer health or patient education approach due to the timeframe limitations of
the class. If you choose one of the other approaches, please see me. The purpose of this assignment is to guide you through the process of selecting and delivering health information to health care consumers.

The project should include the following parts: Description of audience, Description of topic, Search terms, Diagnosis, Drug Therapy, Complementary Therapies and Additional Resources and Summary. Further explanation is given below:

1. For the selected disease. Describe your intended audience, (patients, family, a specific population) and give the objective(s) of your project.

2. Give a brief description of the disease. List two or three sources where your intended audience may find more information.

3. List the search terms used to find information on your topic.

4. Present the etiology of the disease. You may want a paragraph on the etiology and progression of the disease. You may use standard reference resources. List two or three sources where you may find this type of information.

5. For the selected disease, discuss how the disease is mainly diagnosed. (Be brief). List two or three resources that will help your intended audience understand the diagnosis and/or diagnostic procedures.

6. Identify drugs used to treat the disease. Be selected. If several drugs are used, limit yourself to three. Cite the sources where you found the information. Select two or three resources you will give your intended audience. If clinical trials are available, include at least one.

7. Identify possible complementary therapies. Cite the sources where you found the information. List two or three resources you may give to your intended audience.

8. Identify additional resources such as journals, magazines, newsletters, listservs, hotlines.

9. Summary: Give an overall reaction to the project. Include any difficulties you encountered in gathering information for your topic.
